Systems of Equations Review

Graph the following system of equations then write the solution as a coordinate pair.

_____1)

$$x + y = 3$$

$$y = \frac{5}{2}x - 4$$

_____2)

$$-2x + y = -4$$

$$y = -\frac{1}{4}x + 3$$

3) Match *each* phrase in the first column to the statement in the second column.

_____ a. A system of equations has ONE solution when...

_____ b. A system of equations has NO solution when...

_____ c. A system of equations has INFINITELY MANY solutions when...

i. The slope of each equation is different. The y-intercept may be the same or different.

ii. The slope is the same and the y-intercept is the same

iii. The slope is the same but the y-intercept is different. The lines are parallel.

_____5) Write the solution to this system of equations as an ordered pair.

$$4x - y = 10$$

$$y = 2x - 2$$

_____6) Write the solution to this system of equations as an ordered pair.

$$y = 4x + 2$$

$$y = -2x + 6$$

_____7) Write the solution to this system of equations as an ordered pair.

$$\begin{aligned} 6x + 2y &= 20 \\ 6x - 5y &= -8 \end{aligned}$$

_____8) Draw a line from each system of linear equations to the correct description of the solution to the system.

$$\begin{aligned} y &= 2x + 7 \\ y - 2x &= 7 \end{aligned}$$

no solution

$$\begin{aligned} y + 4x &= -5 \\ 2y &= -8x - 20 \end{aligned}$$

exactly one solution

$$\begin{aligned} y &= -\frac{3}{4}x - 2 \\ y &= \frac{3}{4}x + 1 \end{aligned}$$

infinitely many solutions

_____10) A pair of lines intersects at the point $(-3, 4)$. Which pairs of equations could represent these lines? Mark all that apply.

a. $2x + 3y = 6$ $y = x - 7$	b. $2x + 3y = 6$ $y = -3x + 4$
c. $2x + 3y = 6$ $y = -\frac{5}{3}x - 1$	d. $2x + 3y = 6$ $y = \frac{4}{3}x + 4$
e. $2x + 3y = 6$ $y = 2x + 10$	e. $2x + 3y = 6$ $y = -\frac{2}{3}x + 1$

_____11) What solution(s) does the system of equations have? $y = \frac{2}{5}x + 2$
 $-4x + 10y = 20$

- There are infinitely many solutions.
- The only solution is $(5, 4)$.
- The only solution is $(10, 6)$.
- There are not any solutions.
